## **I. Subject**

These test guidelines apply to all vegetatively propagated varieties of *Dendrobium* Sw. of the family Orchidaceae.

## **II. Plant material required**

1. The Protection of Plant Varieties and Farmers' Rights Authority (PPV & FRA) shall decide when, where and in what quantity and quality the plant material are required for testing of a variety denomination for registration under the Protection of Plant Varieties and Farmers' Rights (PPV & FR) Act, 2001. Applicants submitting such plant material from a country other than India shall make sure that all customs and quarantine requirements stipulated under relevant national legislations and regulations are complied with.
2. For all varieties, only 2 to 3 years old 20 plants (10 for each Centre) with at least two shoots shall be required for DUS testing.
3. The plant material supplied should be visibly healthy, not lacking in vigour or affected by any pests or diseases or mechanical damage.
4. Plant material shall not have undergone any chemical or bio-physical treatment unless the competent authority allow or request such treatment. If it has been treated, details of the treatment must be given.

## **III. Conduct of Tests**

1. A test shall normally be conducted for two flowering seasons.
2. Test shall normally be conducted at two places. If any essential characteristics of the variety are not expressed for visual observations at these places, the variety shall be considered for further examination at another appropriate test site or under special test protocol on expressed request of the applicant.
3. The test shall be carried out in the greenhouse under conditions ensuring normal growth for the plant concerned. The size of the pots/ containers shall be such that plants or parts of plants may be removed for measurement and counting without prejudice to the

observations which must be made up to the end of the flowering period. Each test shall include a total of 10 plants.

4. Test shall be done only in pots of prescribed size. The pots shall be kept at a standard spacing recommended for each type or at the spacing specified by the applicant.
5. Additional tests for special purposes may be established.
6. Normally, growth regulators shall not be used.

#### **IV. Methods and Observations**

1. The characteristics described in the Table of characteristics (Section VII) shall be used for the testing of varieties for their DUS.
2. For the assessment of Distinctiveness and Stability, all observations shall be made on 10 plants or parts taken from each of 10 plants.
3. For the assessment of Uniformity, a population standard of 1% and an acceptance probability of at least 95% shall be applied. In the case of a sample size of 10 plants, the maximum number of off-types allowed would be 1.
4. All observations of on the shoot shall be made on the flowering shoot.
5. All observations on the leaf shall be made on the longest leaf of a flowering shoot.
6. All observations on the inflorescence and the flower shall be made at the time when 50% of the flowers on the inflorescence have opened and on the most recently fully opened flower on the inflorescence before fading of colour.
7. All observations on the length and width of the flower and parts of the flower shall be made in the spread out positions.
8. All observations on the colour of sepal, petal, lip and column shall be made on the inner side.
9. For the assessment of colour characteristics, the Royal Horticultural Society (RHS) colour chart shall be used.

## **V. Grouping of Varieties**

1. The candidate varieties for DUS test shall be divided into groups to facilitate the assessment of Distinctiveness. Characteristics which are known from experience not to vary or to vary slightly within a variety and which in their various states are fairly evenly distributed across all varieties in the collection, are suitable for grouping purpose.
2. The following characteristics shall be used for grouping of Dendrobium varieties and hybrids:
  - a) Plant: height (Characteristic 1)
  - b) Internode: number (Characteristics 3)
  - c) Inflorescence: number per shoot per year (Characteristic 10)
  - d) Flower size: width in front view (Characteristic 16)
  - e) Flower: predominant colour (Characteristic 25 & 32)
  - f) Lip: predominant colour (Characteristic 41)
  - g) Lip: colour pattern (Characteristic 43)
  - h) Flowering: season (Characteristics 52)

## **VI. Characteristics and symbols**

1. To assess Distinctness, Uniformity and Stability, the characteristics and their states as given in the Table of characteristics shall be used.
2. Notes 1-9 (numbers) shall be used to describe the state of each character for the purpose of electronic data processing.
3. Legend

(\*) Characteristics that shall be observed during every growing season for varieties and hybrids and shall always be included in the description of the varieties and hybrids, except when the state of expression of any of these characters is rendered impossible by a preceding phenological characteristic or by the environment conditions of the testing region. Under such exceptional situation, adequate explanation shall be provided.

(+) See explanations on the Table of characteristics
4. Characteristics denoted with symbols QL, QN and PQ in the first column of the Table of characteristics shall be indicated as :

**QL:** Qualitative characteristic

**QN:** Quantitative characteristic

**PQ:** Pseudo-qualitative characteristic

5. (a)-(e) see Section VIII for explanation

6. Type of assessment of characteristics indicated in column six of the Table of characteristics are as follows:

**MG:** Measurement by a single observation of a group of plants or parts of plants

**MS:** Measurement of a number of individual plants or parts of plants

**VG:** Visual assessment by a single observation of a group of plants or parts of plants

**VS:** Visual assessment by observations of individual plants or parts of plant

## VII. Table of characteristics

| Sl. No.                     | Characteristic   | State                   | Note | Example Varieties /hybrids   | Type of Assessment |
|-----------------------------|--|-------------------------|------|--|--------------------|
| 1.<br>*<br>QN               | Plant height (From base to the tip of the flowering shoot) | Very small (<20 cm)     | 1    | Den. 'Bangkok Blue',<br>Den. 'Erika'   | MS                 |

## **VIII. Explanations on the Table of characteristics**

### **8.1 Guidelines for recording the observations of vegetative and flowering characteristics**

Characteristics indicated with (a), (b), (c), (d) and (e) in the first column of the Table of characteristics should be examined as indicated below:

- (a) Observations on the leaf, shoot and internode length shall be made on the flowering shoot.
- (b) Observations on the inflorescence and the flower shall be made at the time when 50% of the flowers on the inflorescence have opened and the most recently fully opened flower on the inflorescence before the color starts to fade.
- (c) Observations on the length and width of the flower and parts of the flower shall be made on the spread out positions.
- (d) Observations on the color of the sepal, the petal and the lip shall be made on inner side at apex, mid and base portion.
- (e) Observations on the colour of column shall be made on inner side at apex, mid and basal region.

### **8.2 Explanations for individual characteristics**

**Characteristics 2: Nature of shoot**

**1**

**Cane (woody)**

**3**

**Cane cylindric (fleshy)**

**5**

**Cane clavate fleshy**

**7**

**Bulbous (round)**

**Characteristics 8 : Leaf shape**

**Characteristics 9: Apex of leaf**

**Characteristics 22 & 31: Apex of dorsal sepal & petal**

**Characteristics 24: Apex of lateral sepal**

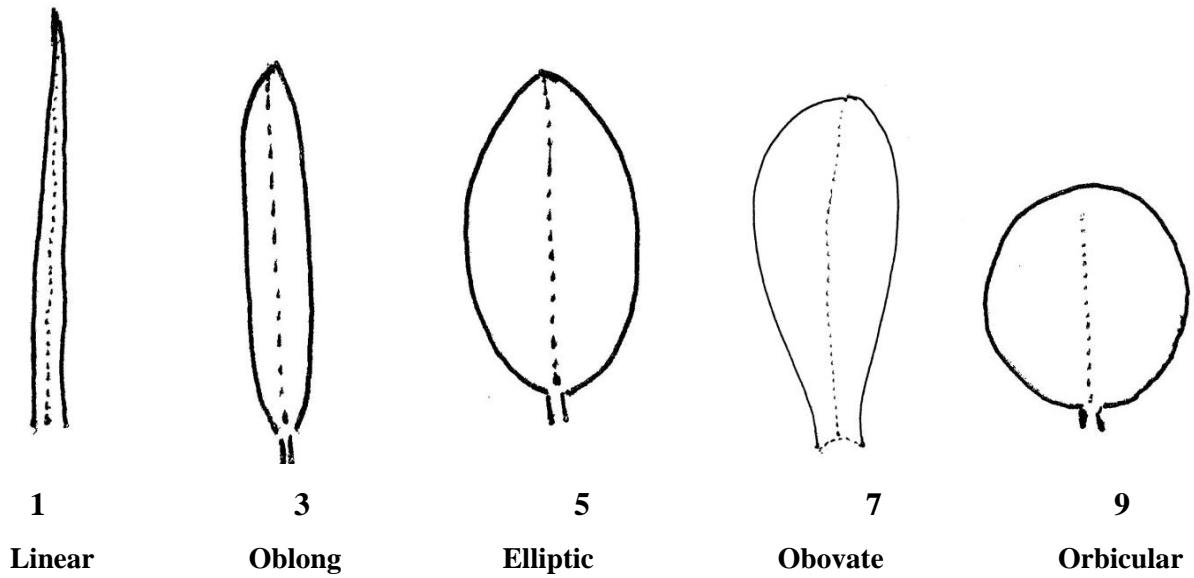

**Characteristics 30: Petal curvature**

**Characteristics 38: Apex of lip**

**Characteristics 21: Dorsal sepal shape**

**Characteristics 23: Lateral sepal shape**

1  
Linear

3  
Oblong

5  
Elliptic

7  
Obovate

9  
Triangular

**Characteristics 29: Petal shape**

1  
Linear

3  
Oblong

5  
Elliptic

7  
Obovate

9  
Ovate

**Characteristics 37 : Lip shape**

**1**  
**Ovate**

**3**  
**Obovate**

**5**  
**Orbicular**

**7**  
**Oblanceolate**

**Characteristics 44: Lip margin**

**1**  
**Entire**

**3**  
**Undulate**

**5**  
**Fimbriate**

## IX. Literature:

Greatwood, J., Hunt, P.F., Gribb, P.J. and Steward, J. (eds.), 1993: (4<sup>th</sup> Edition): *The handbook on orchid nomenclature and registration*. The International Orchid Commission, London, United Kingdom

Henke de Greef, 2008: *Details about D.U.S. Testing for Plant Breeders Rights in Orchids in Europe*. Abstracted in Taiwan International Orchid Symposium.

Karasawa, K. "*Orchid Atlas*", Vol. 6 *Cymbidium and Lycaste*, Orchid Atlas Publishing Society, c/o Yasaka Syobo, Inc. Tokyo, Japan

## X. Working Group Details:

These test guidelines developed by the National Core Committee in consultation with the Nodal Officer, DUS test centre, NRC for Orchids and Task Force (8/2009) constituted by the PPV & FR Authority.

Members of the Task Force (8/2009)

|                    |   |                  |
|--------------------|---|------------------|
| Dr. A.N. Rao       | - | Chairman         |
| Dr. P. K. Rajeevan | - | Member           |
| Prof. S.K. Sood    | - | Member           |
| Dr. G.S. Rawat     | - | Member           |
| Dr. L.C. De        | - | Member Secretary |

### Nodal Officer:

Dr. L.C. De, Principal Scientist, National Research Centre for Orchids, Pakyong, Sikkim

## XI. Name of DUS Test Centres

| Nodal DUS Centre   | Other Test Centre   |
|--|---|
| National Research Centre for Orchids, Pakyong-737106, Sikkim | 1. State Forest Research Institute, Chimpur, Itanagar, Arunachal Pradesh<br>2. College of Horticulture, Kerala Agricultural University, Trichur |
